1 Last Week Review

- We reviewed and quizzed on content from week 3, including discussion on claims and validity
- We began navigating the nuances and difficulties in ethics in psychological research
- We had numerous examples of past failures in ethics, and also introduced the guidelines and principles in the Belmont Report and APA Code of Ethics
- We went over how to investigate and recognize retracted and bad articles that were once published, but no longer considered valid

2 Learning Objective(s)

- Interrogate the construct validity of a study's measured variables.
- Describe the kinds of evidence that support the construct validity of a measured variable.
- Describe the problems and difficulty in psychological measurement compared to other scientific fields
- Be able to describe and identify the different forms or mediums of measurement: self-report, observed, physiological
- Differentiate between reliability and measurement validity of a scale, and also be able to describe the similarities in those regards.
